

# Flex Face Signage

eBrochure

We manufacture our flex boxes using the SignComp extruded aluminium system.

Used for indoor or outdoor applications:

- retail parks
- shop fronts
- commercial units

Any application that requires larger or high level signage.

We have a dedicated department specialising in the fabrication of flex face signage.

 **Manufactured in the *UK***

 ***THREE* year warranty**

 ***FREE* delivery\***

 ***RAPID* Customer Care**

\* Terms & Conditions apply. See website for details

# Flex Face Signage

All our extruded boxes are fully fabricated prior to being coated. This makes sure we have no raw or sharp edges and all fixing are coated.

All our skins are laid out and pre-clipped before delivery or installation.

## Did you know?

We only use four high efficiency LED modules per square metre.

Meaning:

- **lower** buying costs
- **lower** running costs
- **lower** future maintenance costs

The name **flex face** derives from the primary feature of the system; a tensioned flexible PVC banner substrate that stretches across the face of the sign to create something that resembles the skin of a drum. Flex faces are commonly referred to as 'skins' within the industry.

# DAY & N

## The importance of Flex Face Skins

**Single strike:** A non-illuminated skin with a single layer of print.

**Double strike:** Used for illuminated, double layer print.

**Block out:** A three-layer print including black ink as a block out layer for any non-illuminated areas.

**Day & night:** A three-layer print process:

- colour layer
- white ink
- colour again

This method of print allows colour consistency.
